

# Optimizing Care for Patients with Limited Health Literacy

Dean Schillinger, MD
UCSF Professors of Medicine
Division of General Internal Medicine
UCSF Center for Vulnerable Populations,
Zuckerberg San Francisco General Hospital (ZSFGH)

#### Common Social Vulnerabilities

**V**iolence

**U**ninsured

Literacy and Language

**N**eglect

Economic hardship/food insecurity

Race/ethnic discordance, discrimination

**A**ddiction

Brain disorders, e.g. depression, dementia

**I**mmigrant

Legal status

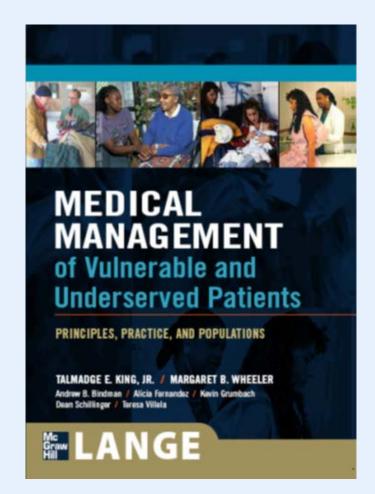

Isolation/Informal caregiving burden

Transportation problems

Illness Model

Eyes and Ears

Shelter

Schillinger 2007

### What is Health Literacy?

- "The degree to which individuals have the capacity to obtain, process, and understand basic health information and services needed to make [informed] health decisions."
- 3 domains:
  - 1. oral (speaking, listening)
  - 2. written (reading, writing)
  - 3. numerical (quantitative)
- Web? Patient portals?
- Capacity/Preparedness ← → Demand Mismatch

Schillinger Am J Bioethics 2007

### 1st National Assessment of Health Literacy

n=19,714 US Adults

- Below Basic: Circle date on doctor's appointment slip
- Basic: Give 2 reasons a person with no symptoms should get tested for cancer based on a clearly written pamphlet

Intermediate: Determine what time to take prescribed medicine based on label

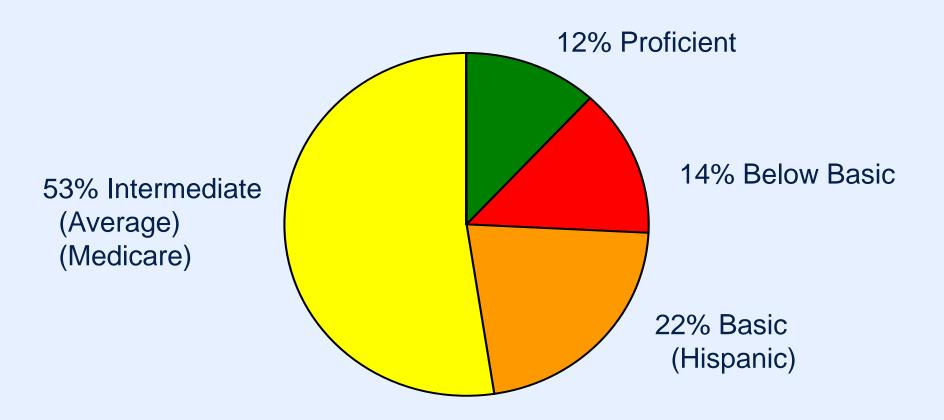

Proficient: Calculate employee share of health insurance costs using table

National Center for Educational Statistics, U.S. Department of Education, 2003

### 1st National Assessment of Health Literacy

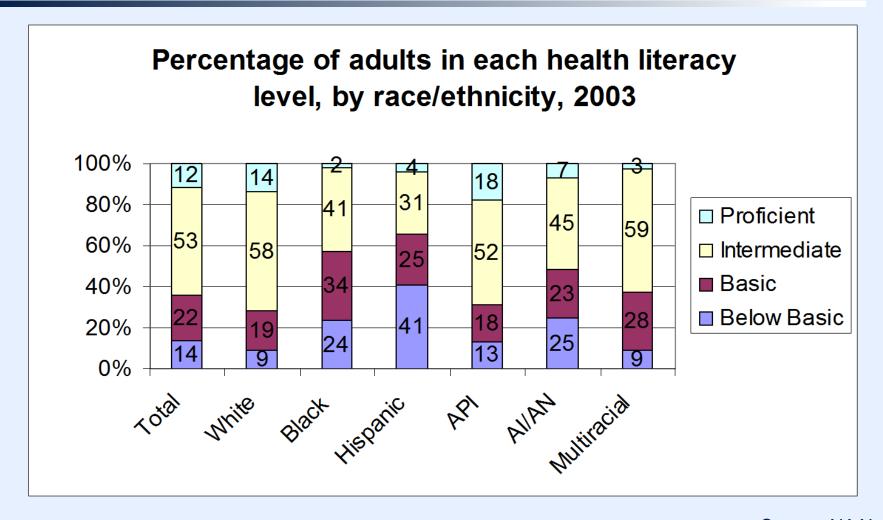

n=19,714 US Adults

National Assessment of Adult Literacy (NAAL): National Center for Educational Statistics, U.S. Department of Education, 2003.

### Prevalence & Disparities in Limited Health Literacy

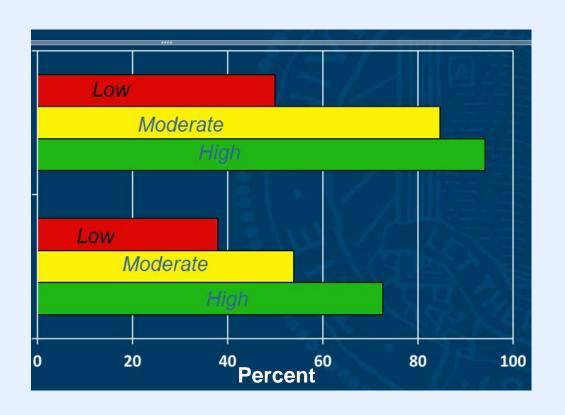

### Patients with Diabetes and Low Literacy Less Likely to Know Correct Management

#### Need to know:

Symptoms of low blood glucose (hypoglycemia)

#### Need to do:

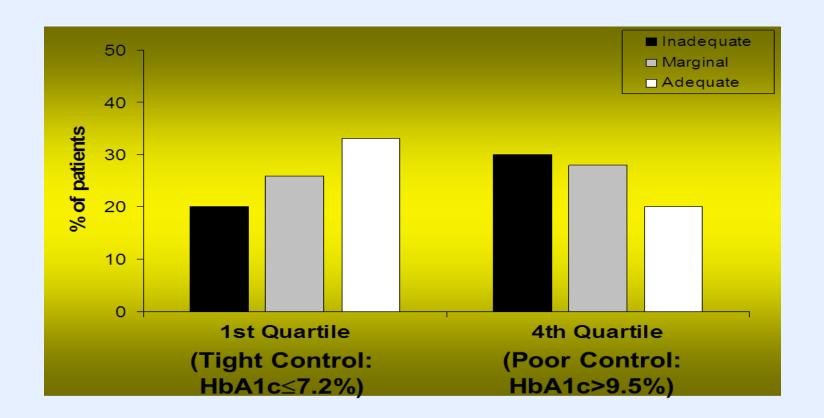

Correct action for hypoglycemic symptoms

Williams et al., Archive of Internal Medicine, 1998

### Health Literacy is Associated w/Glycemic Control N=408

Schillinger, D. JAMA. 2002;288(4):475-482

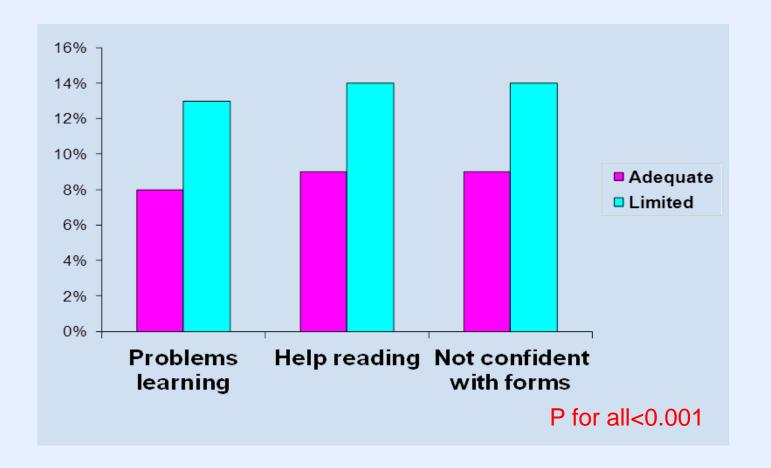

## Lower Health Literacy is Associated with Diabetes Complications

Complication	<b>n</b> **	AOR	95% CI
Retinopathy	111		(1.19-4.57)
Nephropathy	62	1.71	(0.75-3.90)
Lower Extremity Amputation	27	2.48	(0.74-8.34)
Cerebrovascular Disease	46		(1.06-6.97)
Ischemic Heart Disease	93	1.73	(0.83-3.60)

Schillinger, D. JAMA. 2002;288(4):475-482

### Limited Health Literacy Patients Experience More Serious Hypoglycemia/Year N>14,000

Sarkar, Karter, Liu, Moffet, Adler and Schillinger. J Gen Intern Med. 2010 Nov;25(11):1258.

10

My doctor said, "Only 1 glass of alcohol a day". I can live with that.

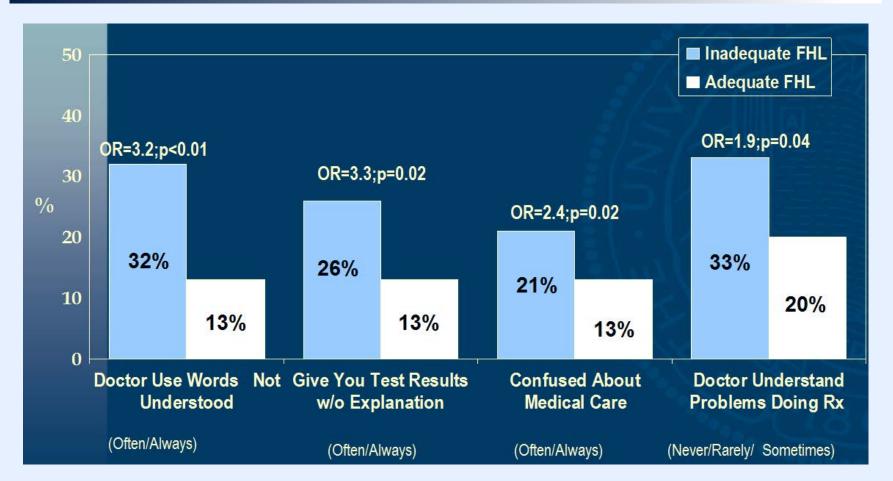

"The problem with communication is the assumption that it has occurred."

- GB Shaw

### Diabetes Patients with Limited Health Literacy Experience Poorer Quality Communication, N=408

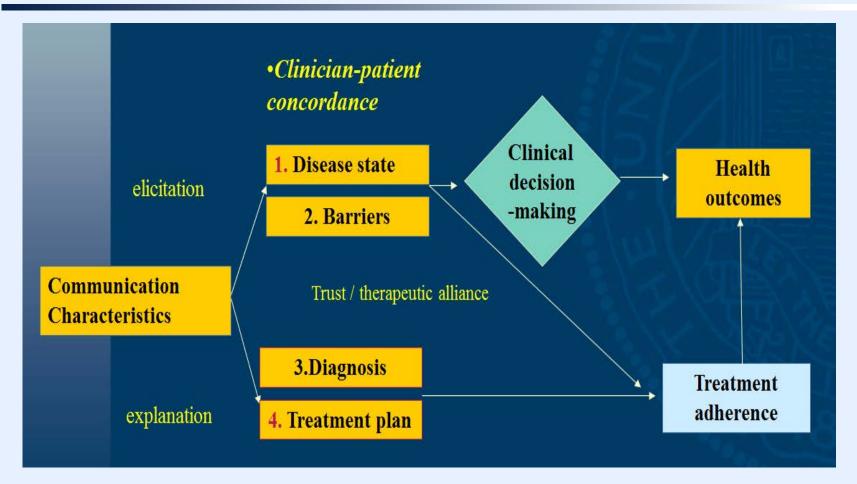

Schillinger D, Bindman A, Stewart A, Wang F, Piette J. Health literacy and the quality of physician-patient interpersonal communication. Patient Education and Counseling. 2004;3:315–323.

12

# Conceptual Framework: 4 Basic Functions of Communication in Outpatient Care

Schillinger, Am J Bioeth. 2007 Nov;7(11):15-8; discussion W1-2.

#### Recommendation #1:

### Eliminate Jargon (Use "Living Room Language")

**GLUCOMETER** 

**HEMOGLOBIN A1c** 

**DIALYSIS** 

**ANGINA** 

**RISK FACTORS** 

**CREATININE** 

### Jargon Terms

...unclarified Glucometer **Immunizations** Weight is stable Microvascular complication System of nerves HbA1c EKG abnormalities **Dialysis** Wide Range Risk factors Kidney function Interact

...clarified
Angina
Microalbuminuria
Ophthalmology
Genetic
Creatinine
Symptom

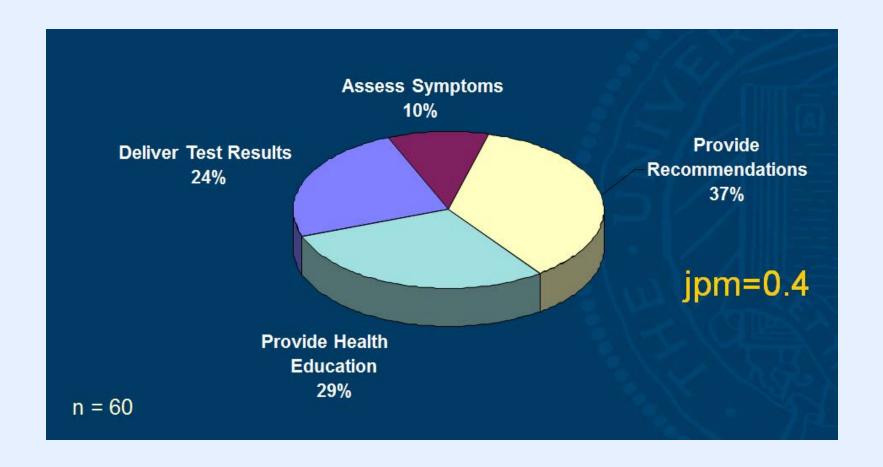

...from patient's own visit Benign Renal clinic Baseline Blood cells Blood drawn CAT scan Screening Blood count Polyp Vaccine Stool Increase your R Correlate Stool was negative Respiratory tract Washed out of your system

Receptors

Short course

### Function of Clinician Jargon in Outpatient Visit

Castro, Wilson, Wang, Schillinger. Am J Health Behav. 2007 Sep-Oct;31 Suppl 1:S85-95.

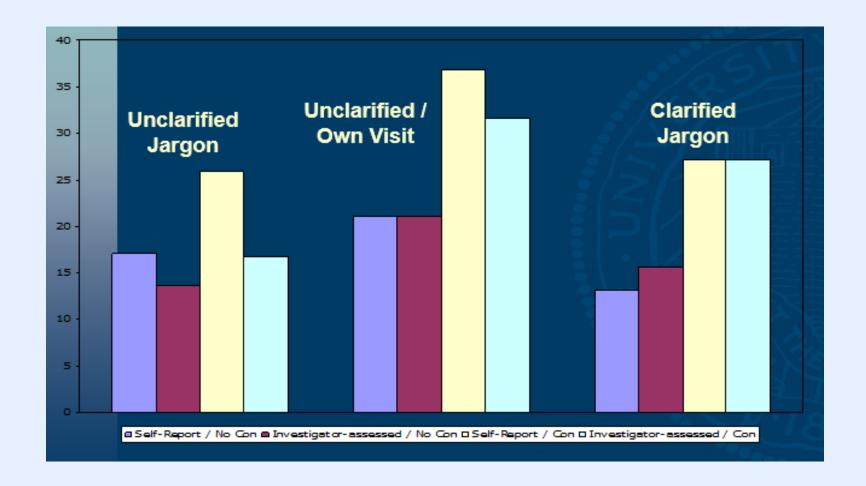

# **Dialysis** "Do you know what the number one cause for people in this country being on dialysis is? **Diabetes**."

Would you please tell me in your own words what <u>dialysis</u> means?		In your own words, what do you think the doctor was trying to tell the patient?		
"Check something every day."	1	"Sugar is too high."	1	
"What? Is that about you toes?"	1	"I can't say it."	1	
"It means that your diabetes is going worse that you have to exercise to make diabetes."	1	"Means that more people are getting diabetes."	1	
"You got to get on machine to pump redo blood to come up to par."	4	"That the sugar was nothmm."	1	
"regarding kidney."	2	"Diabetes is one cause of kidney problems."	3	
"That is a warningabout the kidneymy doctor told me about those side effects of the diabetes."	3	"About dialysis, because they are warning us, they are telling me about the complicationsthat if I'm having problems in my kidney, I'm going to have dialysis."	4	
"It's a way to clean blood get off toxins out the blood."	4	"That you need to be on dialysis to cleanse blood or gonna die."	4	

# Patient Comprehension of Jargon (% Some /Total Understanding)

# **Recommendation #2:** Assess Comprehension w/ "Teach-back" Method, AKA "Closing the Loop"

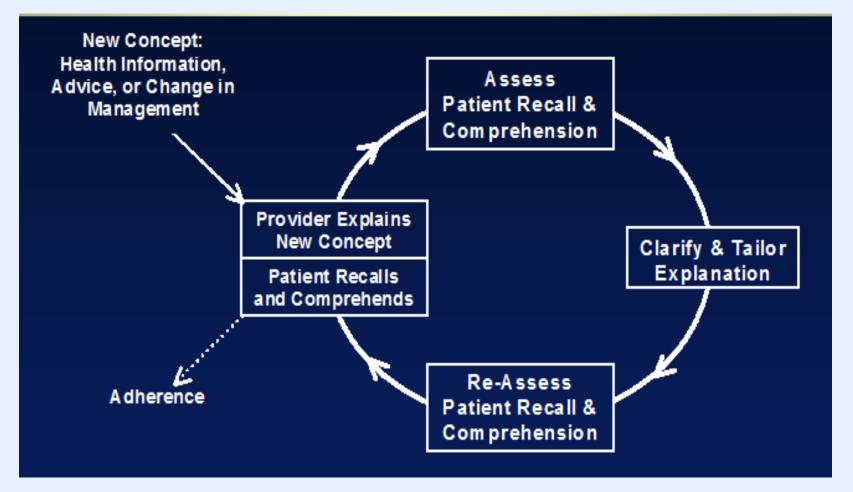

In this interactive technique, the clinician prioritizes amongst the information exchange and explicitly asks the patient to "teach-back" what he/she has recalled and understood re those high-priority domains.

- Similarly, clinicians can use the strategy to assess patient's perceptions of the information or advice given.
- The technique can be used toward the end of a visit or during the course of the visit, so as to tailor communication earlier.

Schillinger et. al. Arch Intern Med. 2003 Jan 13;163(1):83-90.

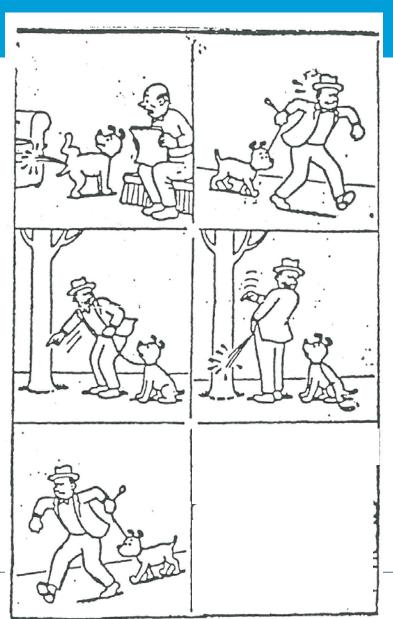

# Closing the Loop: Interactive Communication to Enhance Recall & Comprehension

Schillinger et. al. Arch Intern Med. 2003 Jan 13;163(1):83-90.

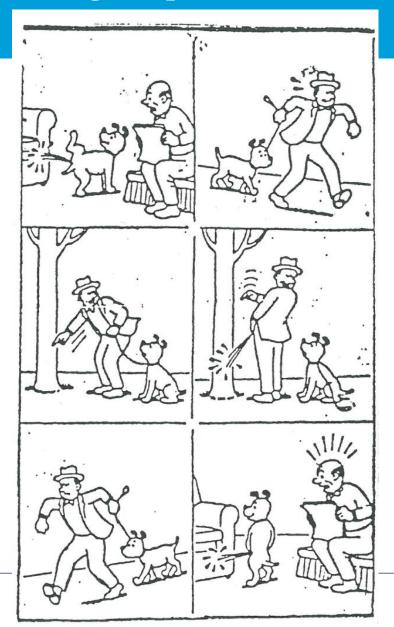

### "Teaching' is one thing......

### .... But 'learning' is quite another

### We Rarely "Close the Loop" – But It's Good When We Do

- Physicians assessed recall or comprehension for 15/124 new concepts (12%)
- When new concepts included patient assessment, patient provided incorrect response half the time (7/15=47%)
- Visits using interactive communication loop not longer (20 min vs. 22 min)
- Application of loop associated with better HbA1c (AOR 9.0, p=.02)

2003

Schillinger et. al. Arch Intern Med. 2003 Jan 13;163(1):83-90.

#### How to Use "Teach Back"?

#### **Example 1 (medication change):**

- Provider (to patient): "I want to make sure I did a good job explaining your diabetes medications, because this can sometimes be confusing. Can you tell me what changes we decided to make and how you NOW will take the medications?"
- Note how the provider places the onus of any possible miscommunication on him/herself. In other words, the "teach-back" task is conveyed not as a test of the patient, but of how well the provider explained the concept.

#### How Not To...

#### **Example #2: Taking the Easy Way Out**

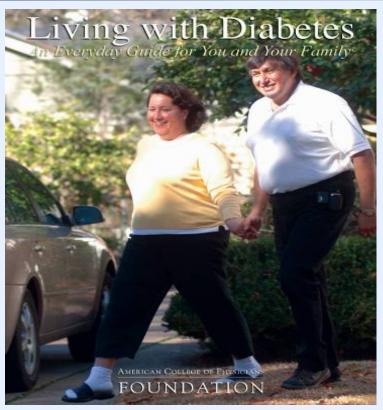

Provider (to patient):
"Do you understand what we just talked about?" or "Do you understand the plan regarding your blood pressure medications?" or "Did that makes sense?"

These routine queries, which do not require explicit articulation of recall, comprehension, or perceptions on the part of the patient, will universally be met with an uninformative (and possible falsely reassuring), "Yes, doctor".

#### Recommendation #3:

### Employ Well-Tested Visual Aids

© American College of Physicians Foundation

https://www.acponline.org/system/files/documents/patients\_families/products/brochures/protected/CPP3003

Living With Diabetes 2014.pdf

or shorter url: http://bit.ly/1TZZVYv

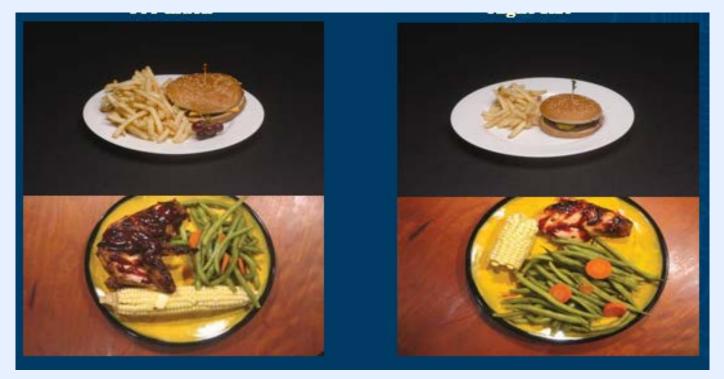

### Pictures Help Tell the Story

Patients looked at pictures first.

Particularly liked pictures of food comparisons.

Too Much

Right Size
