Osher Mini Medical School

How Do I Become A Doctor, Anyway?

Lee Jones, M.D.  Associate Dean for Students

10/16/2017
PRE-MED

- Before medical school, students complete **rigorous prerequisite courses** in biology, physics, English, and chemistry and take the Medical College Admission Test® (MCAT®).

- Many admissions officers use **holistic review**, balancing applicants’ experiences, attributes, and academics to gauge how they might contribute as medical students and physicians.
Medical School (4+ Years)

- Coursework—through classroom, clinical, and community experiences—covers science, problem-solving and communication skills, prevention and care, and professionalism and medical ethics.

- Schools regularly update curricula to include innovations in health care and science, new health issues, population health, and emerging technologies.

- Faculty on the cutting edge of education, research, and clinical care [Service] ensure training stays current.

AAMC
The Match

- In their final year of medical school, students **choose a specialty** on the basis of personal interests, clinical experiences, and other factors and apply to residency programs.

- Most students are matched through the National Resident Matching Program (NRMP).

- On **“Match Day”** in March, students learn where they will complete their residency training.
Residency → Fellowship

- Supervised, hands-on training that must be completed to be licensed and board certified and to practice independently.
- Train as part of a patient care team alongside other health practitioners.
- Exposed to a variety of care settings, including community clinics; diverse patients and cases; and cutting-edge research and care.
- After completing their residencies, some residents choose to undertake a fellowship, which adds one to three years of study in a subspecialty area.

AAMC
“Real Life”

- Physicians must **obtain licensure in the state in which they will practice** their chosen specialties.

- **Twenty-four specialty boards** establish criteria that physicians must meet to be certified.

- The rapid pace of change in medicine makes continuing medical education programs essential.

- Specialty boards require **recertification on a regular basis**, a process called maintenance of certification.
"At UCSF, our mission is to advance health worldwide, and we are attracting some of the nation’s best and brightest students to help us achieve that goal. One of the reasons our students come to UCSF is to work in a culture of discovery and innovation. They work closely with a wonderful community of faculty and help them solve important problems in healthcare today, in areas such as molecular medicine, clinical and translational research, medical education scholarship, and optimizing clinical care delivery.”

Catherine Lucey, MD, Vice Dean for Education
Admissions

Undergraduate Majors

We welcome applicants who have pursued a wide range of undergraduate disciplines. Students who elected to major in the humanities and social sciences are also expected to complete the required science courses. This does not mean that we encourage students to pursue a smattering of knowledge in a great many subjects. Rather, we believe that you gain the richest, most satisfying intellectual experience from the in-depth study of a subject that captures your passion.
Academic Performance

- **Academic excellence** is one of several ways students may demonstrate a high degree of motivation and capability for the medical profession. At UCSF, academic performance is evaluated in the context of other factors, such as the difficulty of the course of study selected, the number of units attempted, and an individual's background. Although applicants who have a grade-point average (GPA) below 3.20 generally are not considered favorably for admission, applicants who have nontraditional backgrounds should not be discouraged. In addition, students should not select courses only for the purpose of raising their GPA.
We **strongly recommend** that premedical students pursue a four-year undergraduate curriculum and **obtain a baccalaureate degree before entering medical school.**

Technical Standards
Technical (Non-Academic) Standards

- Observation
- Communication
- Motor Function
Technical (Non-Academic) Standards

- Intellectual – Conceptual Abilities
- Integrative and Quantitative Abilities
- Behavioral and Social Attributes
- Ethical and Legal Standards
Selection Factors

- Selection is based on an appraisal of those **intellectual and personal characteristics** that the admissions committee regards as desirable for prospective medical students and physicians. Both **cognitive (primarily academic) and non-cognitive factors**, such as the applicant's statement and extracurricular activities play an important part in the selection process. Based on the evaluation of these factors, a **limited number of applicants (500) are selected for interview.**
Student Achievement of Multiple Goals

Self-directed, life long learners capable of…

- Monitoring own performance
- Identifying and addressing gaps in knowledge
- Problem solving
- Generating and examining research questions
- Reviewing and synthesizing scientific literature
- Applying knowledge to practice
- Critical self-reflection
Individualized consideration is given to how each applicant may contribute to
• teaching and learning and
• practice of medicine
while weighing and balancing the range of criteria needed in a class to achieve the outcomes desired by the school.
Admissions Process/Stats

- **STEP 1**: AMCAS Application (8,000)
- **STEP 2**: Secondary Application (5,000 – 60%)
- **STEP 3**: Interview (500 – 6%)
- **STEP 4**: Acceptance (app. 200 total Offers – 3%)
- **STEP 5**: Waitlist (app. 150 – 2%)
- **STEP 6**: Matriculating class (150 – 2%)
