

## THE HEALTH EMERGENCY OF CLIMATE CHANGE

**Tuesday  
evenings**

**April 28– June 2**

**7:00 to 8:30 pm**

As the global impact of climate change accelerates, there is increasing awareness that human health is severely threatened. The Lancet Countdown recently warned that children born today will experience climate-related illnesses throughout their lives, and extreme weather events such as fires and floods have underscored the urgent need to act now and prepare for the future. Just what are these threats to health and what can we do about them?

In this program devoted to Climate Medicine, UCSF faculty explore these questions and highlight the impact of global warming on asthma and allergies, mental illness, heart disease, infections, and skin health. In addition, a panel of experts will focus on the special risks to children, pregnant women and older adults.

### **COURSE CO-CHAIRS**

**Katherine Gundling, MD**

Professor (Emerita) of Medicine  
Former Practice Chief for the Allergy /  
Immunology Department  
University of California, San Francisco

**Robin Cooper, MD**

Assistant Clinical Professor of Psychiatry  
University of California, San Francisco

## WHAT'S NEXT?: UCSF Scientists Outline What's To Come

**Wednesday  
evenings**

**April 29 – June 10**

**7:00 to 8:30 pm**

UCSF has a long history of pioneering biomedical research and a bold vision for advancing health worldwide. However, what does that really mean in the near future and beyond? Hailing from a wide spectrum of disciplines, UCSF scientists invite you inside their work to learn what the next decade may bring to the world of medicine. Direct from those who live and breathe it every day, find out WHAT'S NEXT in science.

### **COURSE CHAIR**

**Jeffrey Tabas, MD**

Professor of Emergency Medicine, Director of Outcomes and Innovations for CME,  
University of California, San Francisco
